UI & Icon Design –

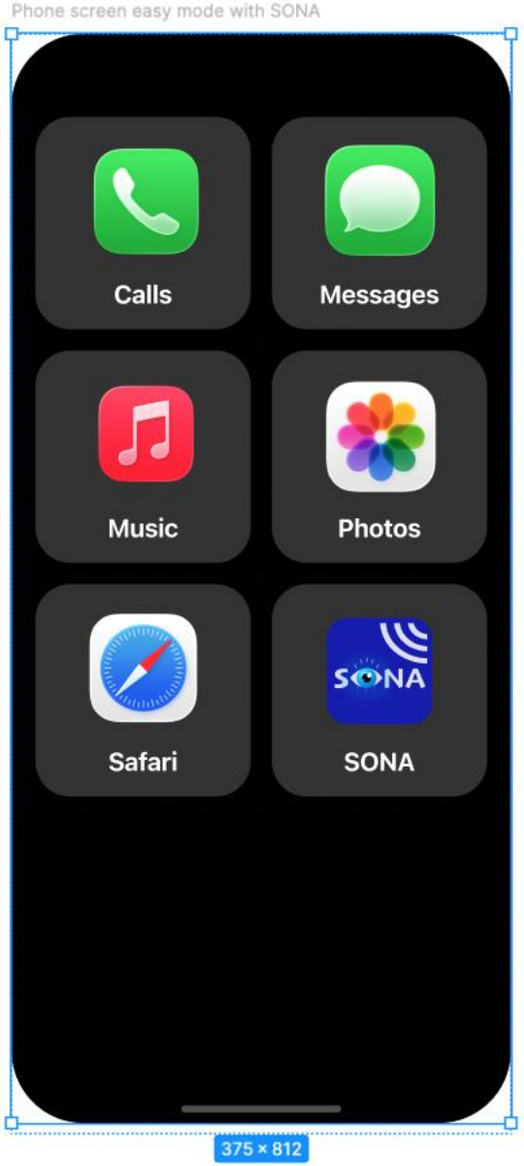

Logo and icons I designed in Figma, then built into Unity.

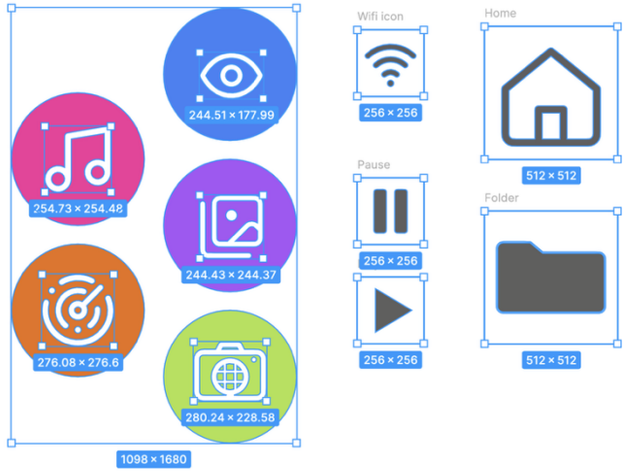

Feature Icons & Voice Characters –

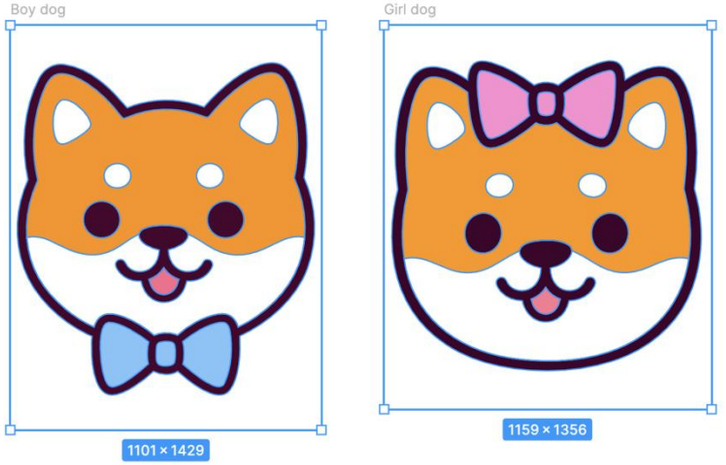

Colour-coded feature icons, plus two dog avatars for warning voices.

SONA App is the world's first real-world elderly and visually impaired assistive application that combines real time Visual SLASM with YOLO-World object detection.

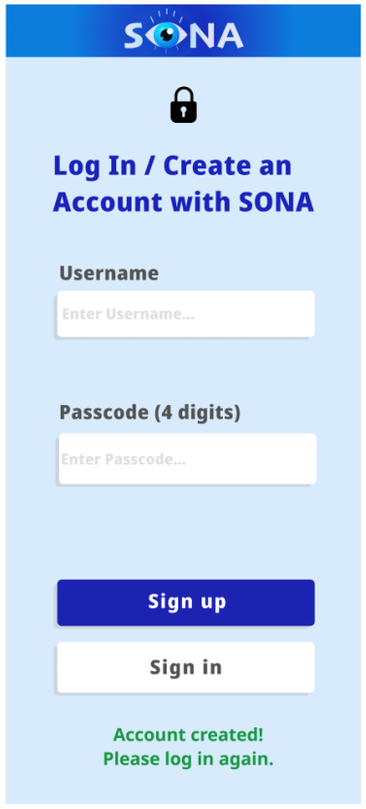

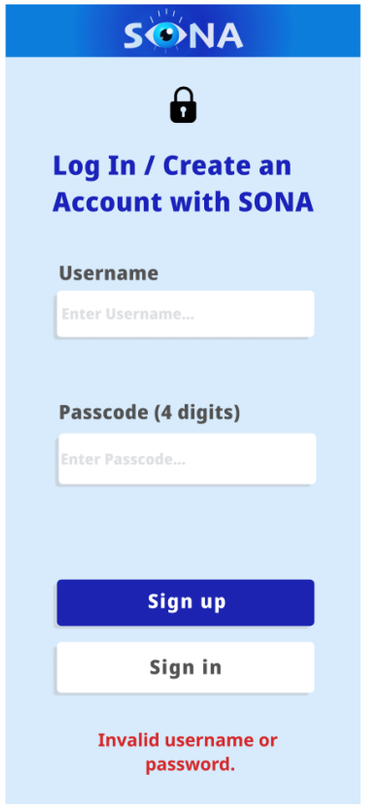

Sign In –
Three login states: default, account created, and error.

Setup & Home Menu –
Language and voice setup, then a colour-coded home menu.

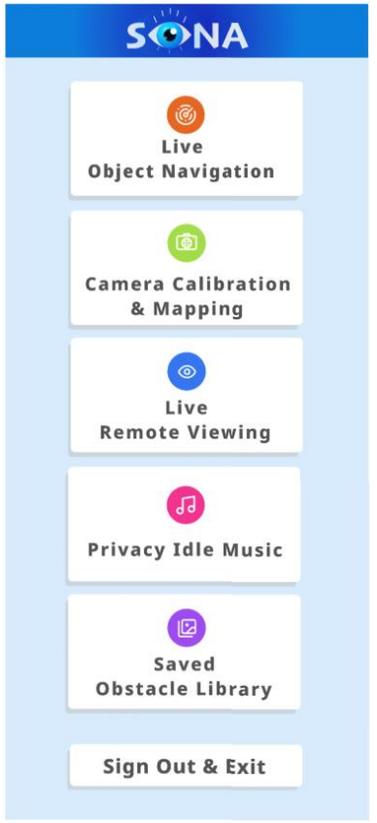

Live Object Navigation –
Detects obstacles, reroutes path, and warns by voice with distance.

Camera Calibration & Mapping –
Calibration maps new environments and adapts to new phone cameras.

Privacy Idle Music –
Users upload their own songs and cover art for idle mode.

Remote Viewing & Obstacle Library –
Wi-Fi remote viewing and timestamped obstacle detections saved by day.

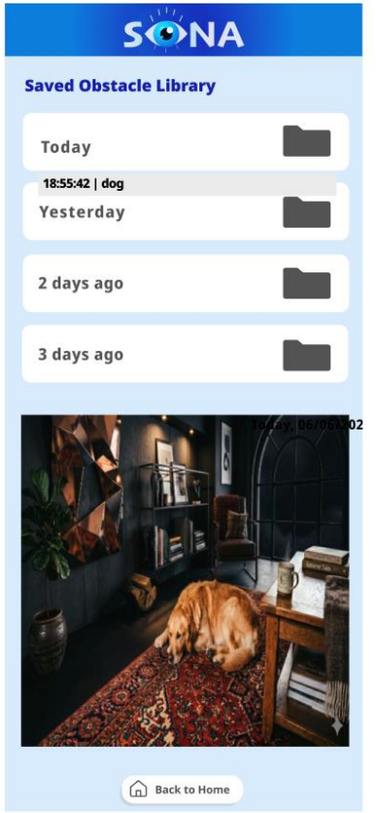

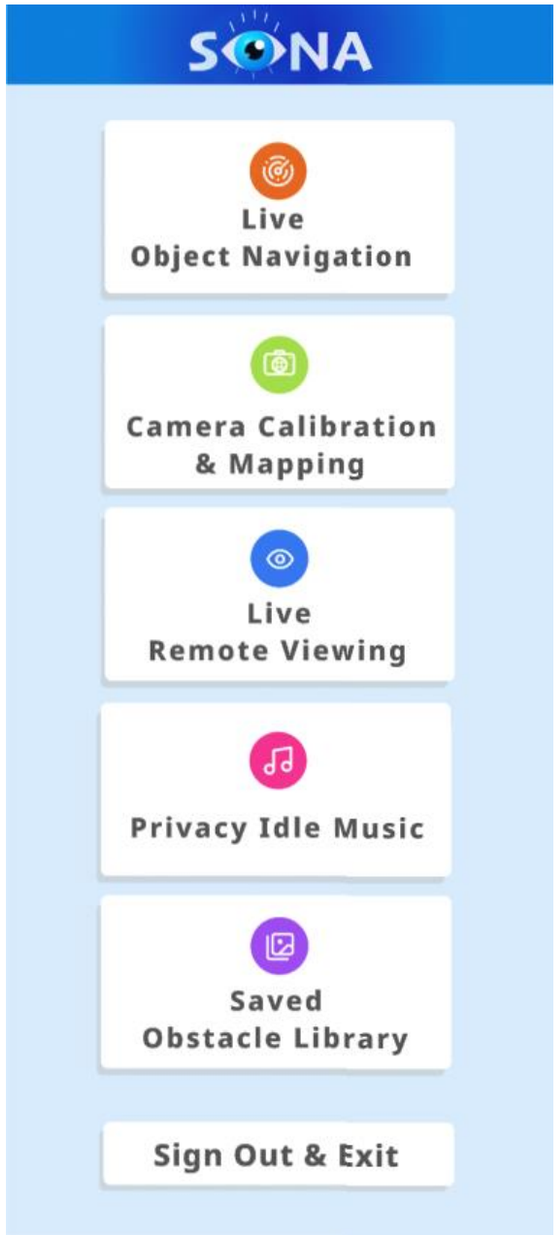

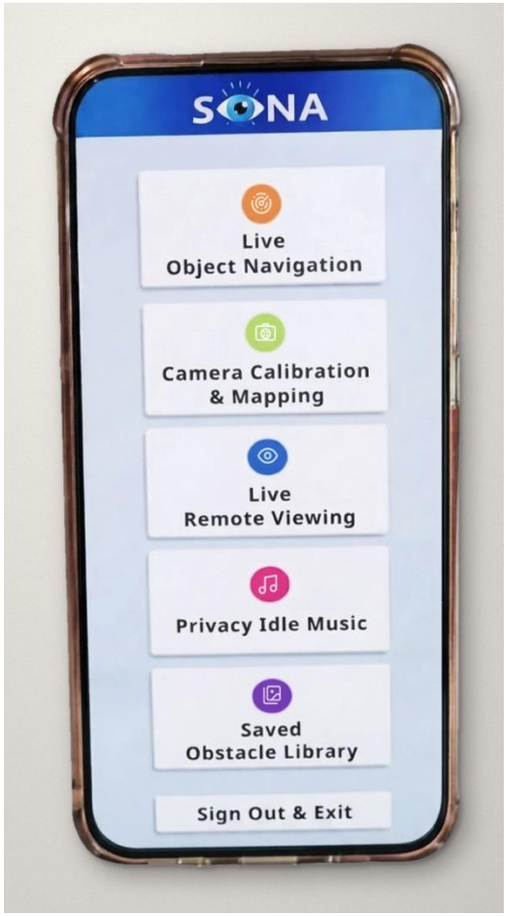

Home Menu: Figma vs Unity –
Left: Figma design. Right: the same screen running on Unity.

Live Navigation: Figma vs Unity –
Left: Figma design. Right: the same screen running on Unity.
